## Background and Objectives

More than 3,000 ASRT members belong to the Management Chapter. This figure represents about 3% of the total ASRT membership and about 9% of all ARRT-registered radiologic technologists who hold managerial/administrative titles. As of spring 2002, however, little hard data existed as to what attracts these members to ASRT and the Management Chapter rather than or in addition to their membership in other radiology management societies. Nor did the ASRT have a definite picture of these members with respect to their professional background and current positions.

A primary purpose of the survey was to establish the professional profile of ASRT Management Chapter members. The survey also collected data concerning services and benefits Management Chapter members obtain from ASRT and other professional societies that seem most relevant to their role as managers. Results associated with this objective are reported in *Management Chapter Survey, 2002 (Internal Report)*.

The ASRT also used this opportunity to obtain managers' perspectives on a number of current radiologic sciences issues, such as technologists' access to the Web and the cost/benefit ratio for local and traveling temporary workers. The survey included several such questions; this report focuses on responses to those questions.

## Methodology

In mid-October 2002, a questionnaire was mailed 3,026 individuals recorded in ASRT records as members of the Management Chapter. By mid-December 2003, 670 questionnaires had been returned for a return rate of 22%.

Surprisingly, 15% of the respondents reported that they never have been members of the Management Chapter. However, a review of the records revealed that about 12% of those individuals sent questionnaires (i.e., ASRT members carried on the rolls as members of the Management Chapter) never requested chapter membership. It appears that those members were assigned to the management chapter based on their job title when the chapter system was instituted at ASRT in the mid-1990s. Therefore, there is an unintentional subsample of 103 individuals whose job titles suggested that Management Chapter membership was appropriate, but who never actively requested membership in the chapter.

Because the survey was mailed to the entire Management Chapter, the distribution underlying sample proportions and percentages is actually a hypergeometric distribution, rather than a binomial distribution. The standard errors and confidence intervals for the various measures are smaller than they would be had only a small fraction of the population been sampled by a factor

of  $\sqrt{\frac{N-n}{N-1}} = \sqrt{\frac{3026-670}{3025}} = .8825$ . Overall percentages in the 40% to 60% range are thus

estimated (at the 95% level of confidence) to within  $\pm 3.4\%$  and those at 10% and less or greater than 90% to within  $\pm 1.0\%$ .

## Executive Summary

### Professional Profile

The job title of the modal survey respondent was director or manager of radiation or imaging services (or a comparable designation). However, all levels of administration from senior staff technologist to vice president were represented.

Given that 90 respondents provided 84 different “other” job titles, there does not appear to be a strong consensus on appropriate job titles for managers in the radiologic sciences.

The modal respondent listed six responsibilities, with 84% to 87% having responsibility for disciplinary actions, hiring and purchasing decisions; 65% to 74% were responsible for creating capital and operating budgets and scheduling staff.

Nearly 70% of these managers worked in a hospital setting, 10% in private physician practices and 9% in clinics.

The average Management Chapter member has held a managerial position in the radiologic sciences for 13.8 years out of a total of 22.1 years in the profession. The average respondent has been in his or her current position for 5.6 years or about 40% of his or her total career as a radiologic sciences manager. The average Management Chapter member has been an ASRT member for 11 years — less than half as long as he or she has worked in the radiologic sciences and almost three years less than his or her tenure as a manager.

These managers supervise from zero to more than 100 people (radiologic technologists and others), with about half supervising 28 or fewer people. Substantial majorities of managers supervise radiographers, mammographers and computed tomography (CT) specialists. About half supervise nuclear medicine technologists and magnetic resonance (MR) specialists; only about an eighth supervise radiation therapists. More than half mentioned specialties other than the six on the checklist provided. Of 89 respondents specifying other specialties, more than 60% mentioned ultrasound, either alone or in combination with other specialties.

### Perspectives on Current Professional Issues

Policies concerning staff technologist access to online continuing education (CE) varied considerably. Forty percent of the Management Chapter members reported that their staff technologists may obtain their CE online using workplace computers and count the time as on-job time. However, 39% said that staff technologists may not obtain CE online at the workplace, and another 17% reported that technologists may access online CE at the workplace but must count the time as break time, personal time or unpaid leave.

More than half (53%) of Management Chapter members indicated that staff technologists may use computers within their departments for online CE, with 8% saying that the technologists may use the same workstations used for performing procedures. A further 16% of respondents indicated that computers were available for CE purposes but outside the imaging or radiation therapy department.

Twenty-nine percent of Management Chapter members indicated that their staff technologists may not use the Internet for purposes other than CE. Of these managers, 22% reported that non-CE Internet use must be clearly related to the technologist's job. For 24% of survey respondents, the range of permissible use also included educational purposes and for another 9%, professional development. Finally, about an eighth of these managers said that Internet use for any purpose is "tolerated or encouraged as long as it doesn't interfere with performance of the technologist's duties."

Attitudes towards applications training were generally positive. Substantial majorities of managers agreed with the statements, "Applications training is one of the most important kinds of continuing education; its value should be recognized by the granting of CE credits" and "Technologists in my department would be up in arms if I (or the ARRT) were to discontinue ... CE credit for on-the-job applications training." Sizeable majorities disagreed with the statements that "Granting CE credit for on-the-job applications training adversely affects staff morale" and "The granting of CE credit for on-the-job applications training should be discontinued." The only negative indicator was that 42.5% of Management Chapter members agreed with the statement, "Many of the technologists awarded CE credits for on-the-job applications training have not been able to attend the full training session(s)."

Slightly more than half of the facilities where these Management Chapter members work employed R.T. aides, although these employees may not be called by that term. A large majority (80%) of these facilities train R.T. aides on the job (OJT). Most (64%) of the facilities using OJT entrust training to the technologist to whom a given R.T. aide is assigned. Fewer than 3% of managers reported relying on academic programs to train R.T. aides. Among the 13% of facilities that use an on-site program for R.T. aide training, the length of that program varied from half a day to 90 days, with the median length being 8 days.

More than a third of these Management Chapter members reported that they never employ temporary technologists. Another 47% indicated that they hire short-term staff only "as a temporary expedient until permanent staff can be hired." Nineteen percent of managers surveyed said that they use temporary workers to fill in for permanent staff who are on leave.

Almost 80% of respondents reported that they pay local temps (those "who reside in the local area and commute from their homes to their temporary assignments") more than they do permanent technologists, and only about 1% said that they pay local temps less. About half of the managers estimated that local temps receive at least 25% higher salary/wages than do the permanent technologists in their departments. Taking into account factors such as health insurance and other benefits, 61% of these managers believed that overall compensation for local temps is higher than for permanent technologists, 6% believed that overall compensation is lower and about a third thought that total compensation is about the same for local temps as for permanent staff, all things considered.

Differentials in pay and other benefits between traveling temporary technologists and permanent technologists appear to be even greater than those between local temps and permanent technologists. In particular, 92% of respondents reported that total compensation to traveling technologists is higher than for permanent staff; less than 1% of managers indicated that

compensation is lower for travelers than for permanent staff; and 8% of those surveyed thought that total compensation is roughly equivalent, all things considered. However, a number of Management Chapter members cautioned in written comments that the pay and other benefits actually received by traveling temps should be distinguished from the much higher amounts paid to temporary staffing agencies.

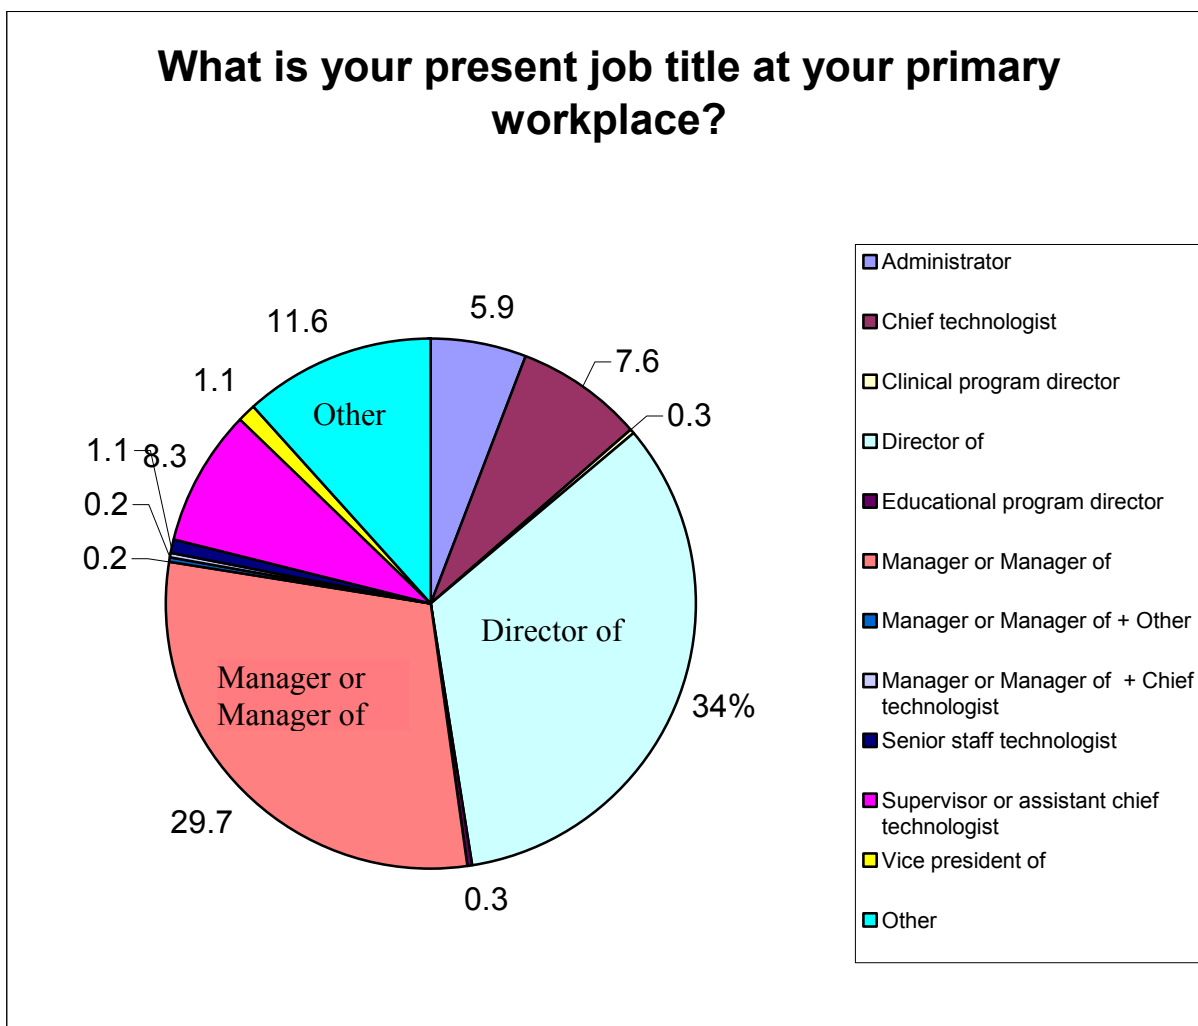

The vast majority (92%) of managers considered hiring a permanent technologist to be much more cost effective than hiring a traveling temp; another 6% considered the permanent technologist somewhat more cost effective.

Several (102) Management Chapter members added comments on the above issues or on other aspects of their managerial roles, and 56 wrote comments beside particular questions on the survey.

## Illustrated Narrative

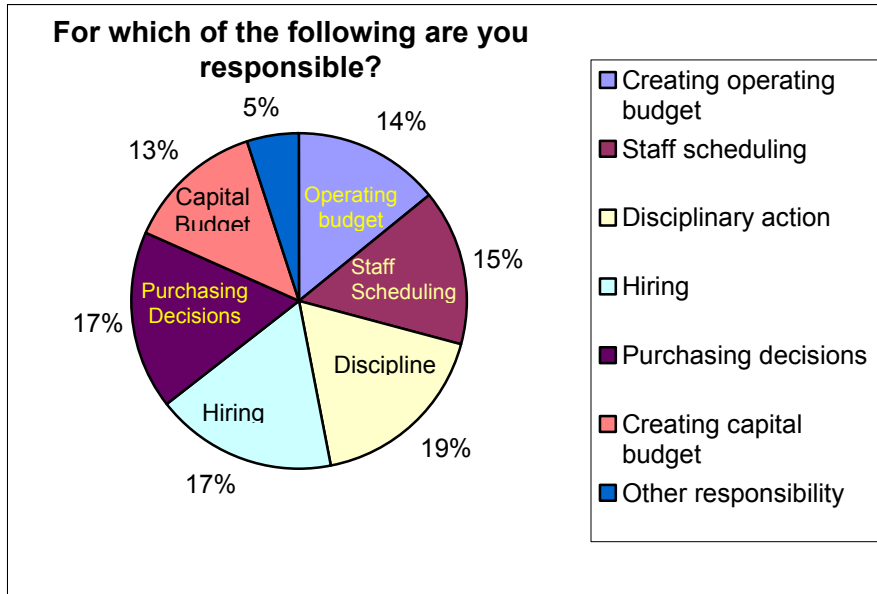

### Professional Profile

The job title of the modal survey respondent was director of (33.8%) or manager of (29.7%) radiation or imaging services (or a comparable designation). However, all levels of administration from senior staff technologist to vice president were represented. Write-in responses for job title in the “other” category included positions such as staff technologist and CEO. Fewer than 1% of the respondents were directors of clinical or educational programs and about 1% were staff technologists.

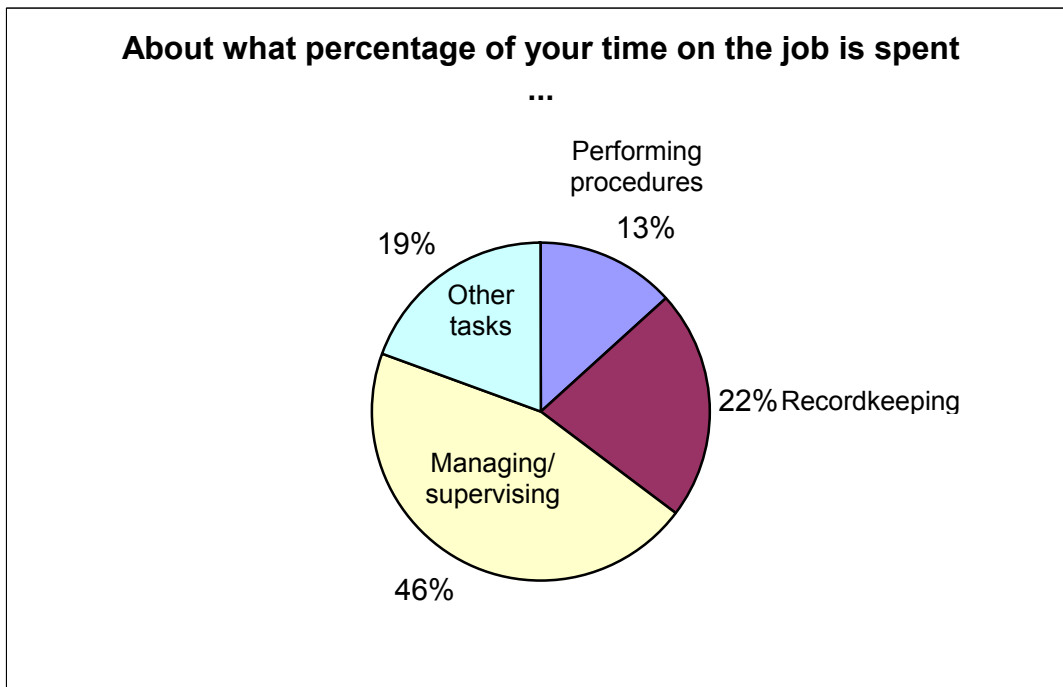

The modal respondent listed six responsibilities, with 84% to 87% having responsibility for disciplinary actions, hiring, and purchasing decisions: 65% to 74% were responsible for creating the capital and operating budgets and for scheduling staff. In addition, 204 (30%) of these managers mentioned 189 responsibilities other than or in addition to the six listed in the survey.

More than half (54%) of respondents spend at least some of their on-job time “performing imaging or radiation therapy procedures.” Of those who do, most (72%) spend only a quarter of their time or less performing procedures, with an overall median of 1% and a mean of 13%. Close to half of the respondents’ time (46%, on average) is spent managing/supervising those who perform procedures.

Nearly 70% of managers surveyed work in a hospital setting, 10% in private physician practices and 9% in clinics.

Management Chapter members work in institutions that vary greatly in size from zero to 3,000 beds, from 35 to 100,000 exams performed per month and from 1 to 5,000 employees. For a given measure, the median size was 238 beds or 2,130 exams per month or 45.3 employees.

Almost three-quarters of Management Chapter members have been employed in the radiologic sciences for more than 20 years, with the mean time in the profession being 22.1 years and with half of the respondents working in the radiologic sciences for 23.1 years or more.

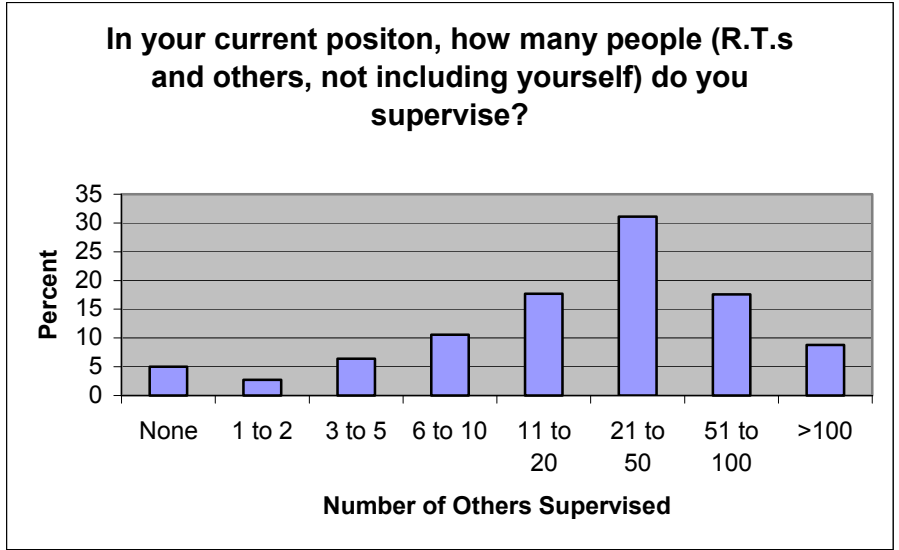

The average Management Chapter member has held a managerial position in the radiologic sciences for 13.8 years out of a total of 22.1 years in the profession.

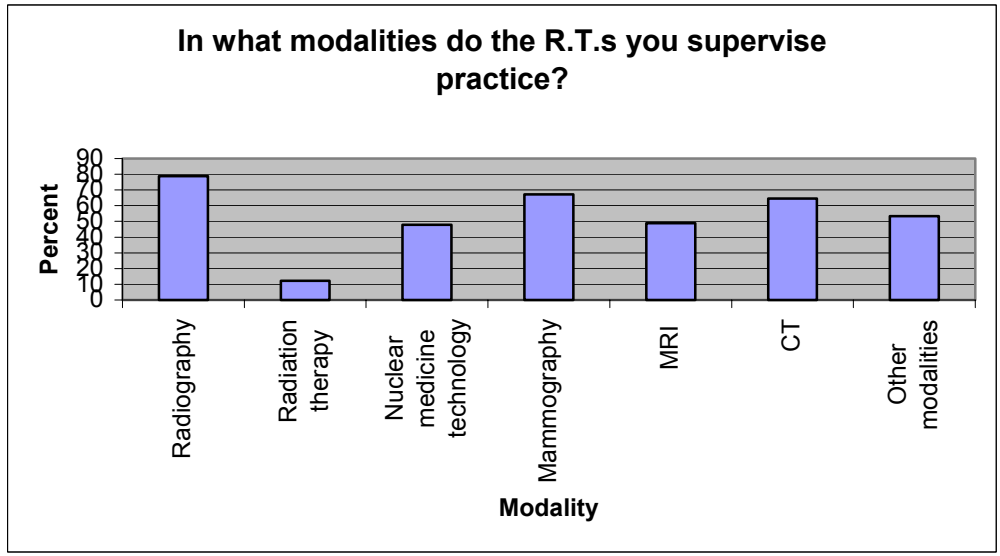

The average respondent has been in his or her current position for 5.6 years or about 40% of his or her total career as a radiologic sciences manager.

These managers supervise from zero to more than 100 people (radiologic technologists and others), with about half supervising 28 or fewer people.

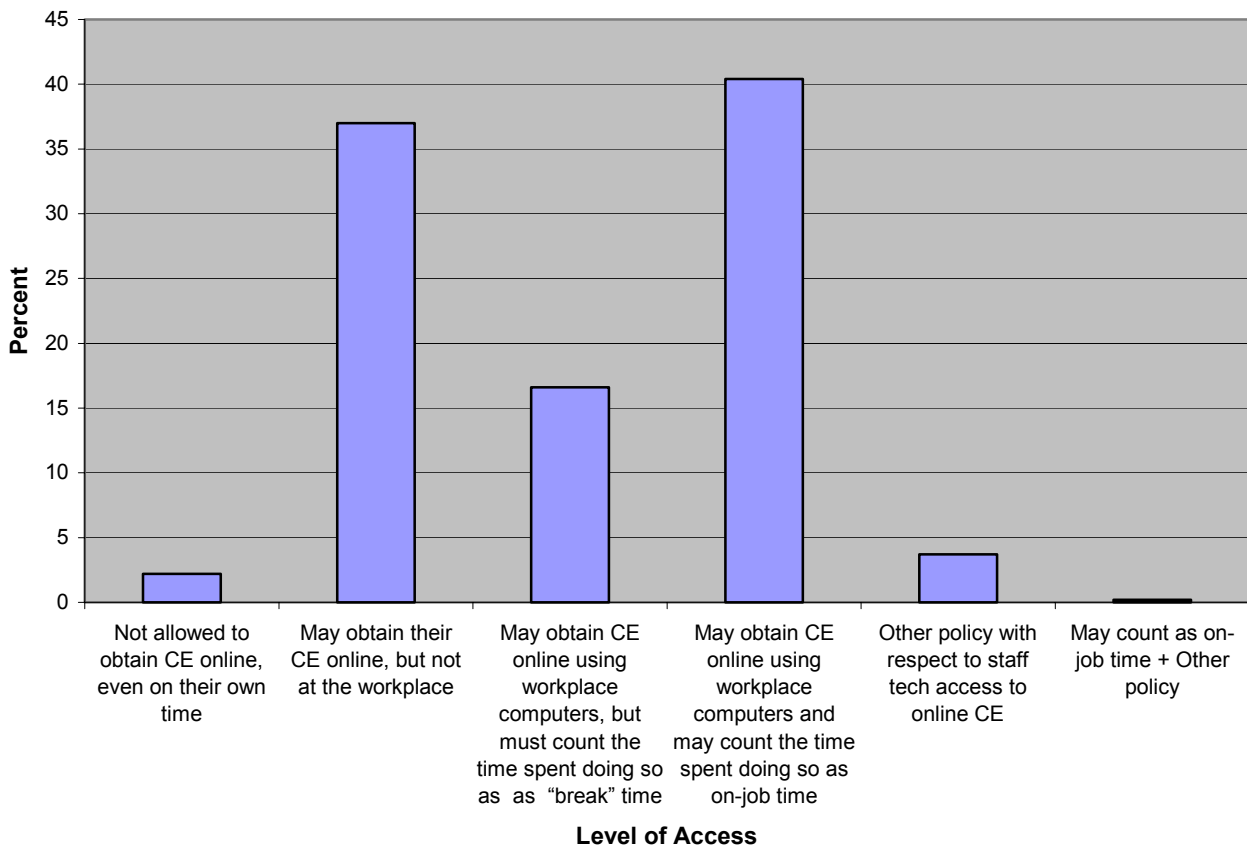

Substantial majorities of managers supervise radiographers, mammographers and computed tomography (CT) specialists. About half supervise nuclear medicine technologists and magnetic resonance (MR) specialists; only about an eighth supervise radiation therapists. More than half mentioned specialties other than the six on the checklist provided. Of 89 respondents specifying other specialties, more than 60% mentioned ultrasound, either alone or in combination with other specialties.

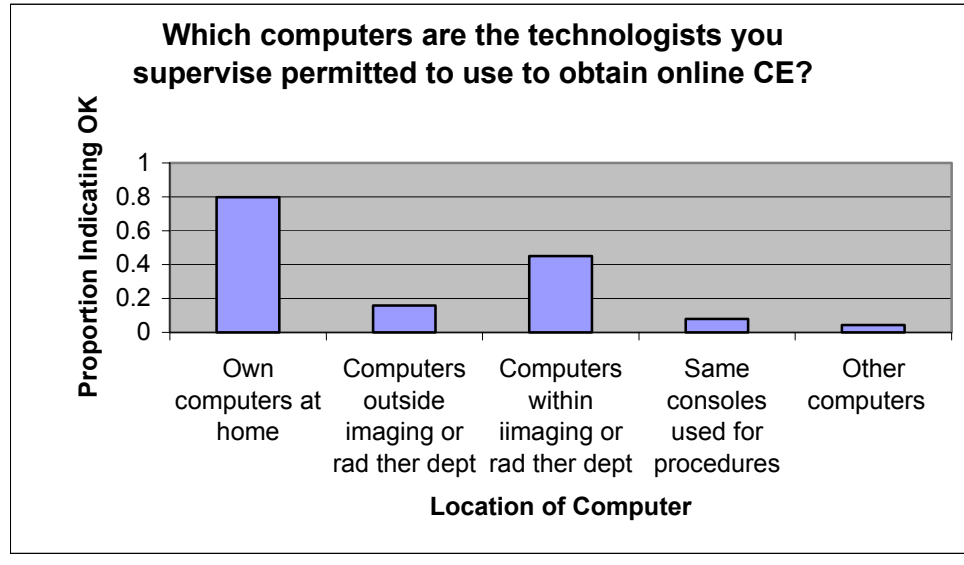

## Perspectives on Current Professional Issues

Policies concerning staff technologist access to online continuing education (CE) varied considerably. Forty percent of the Management Chapter members reported that their staff technologists may obtain their CE online using workplace computers and count the time as on-job time. However, 39% said that staff technologists may not obtain CE online at the workplace, and another 17% reported that technologists may access online CE at the workplace but must count the time as break time, personal time or unpaid leave.

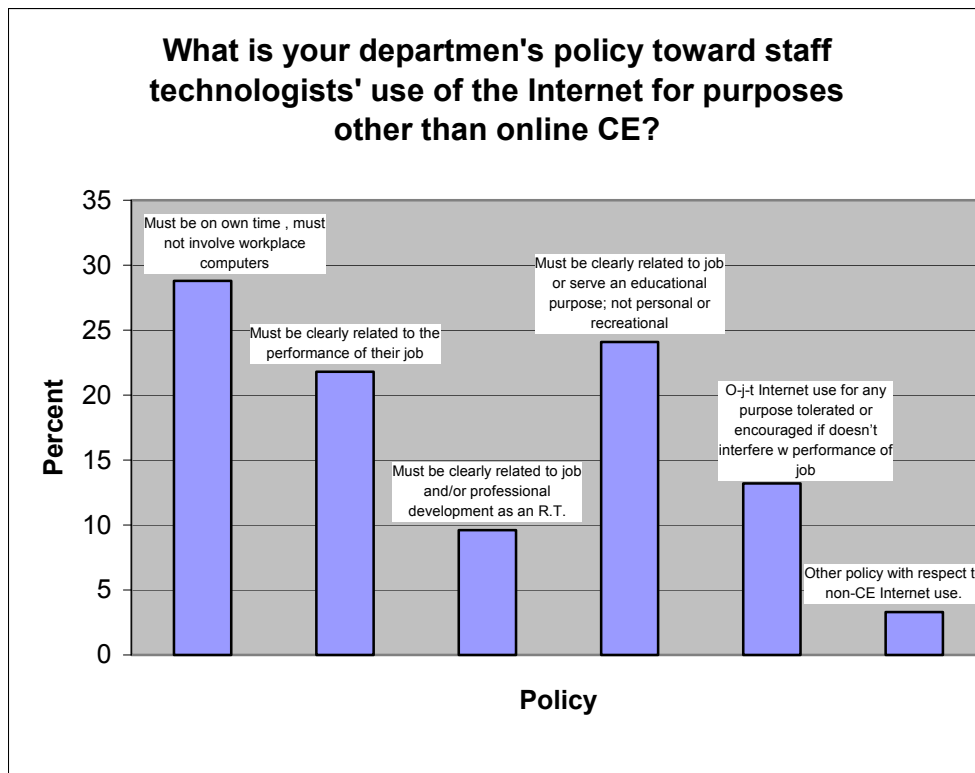

**What level of access to online CE do the staff technologists in your department have?**

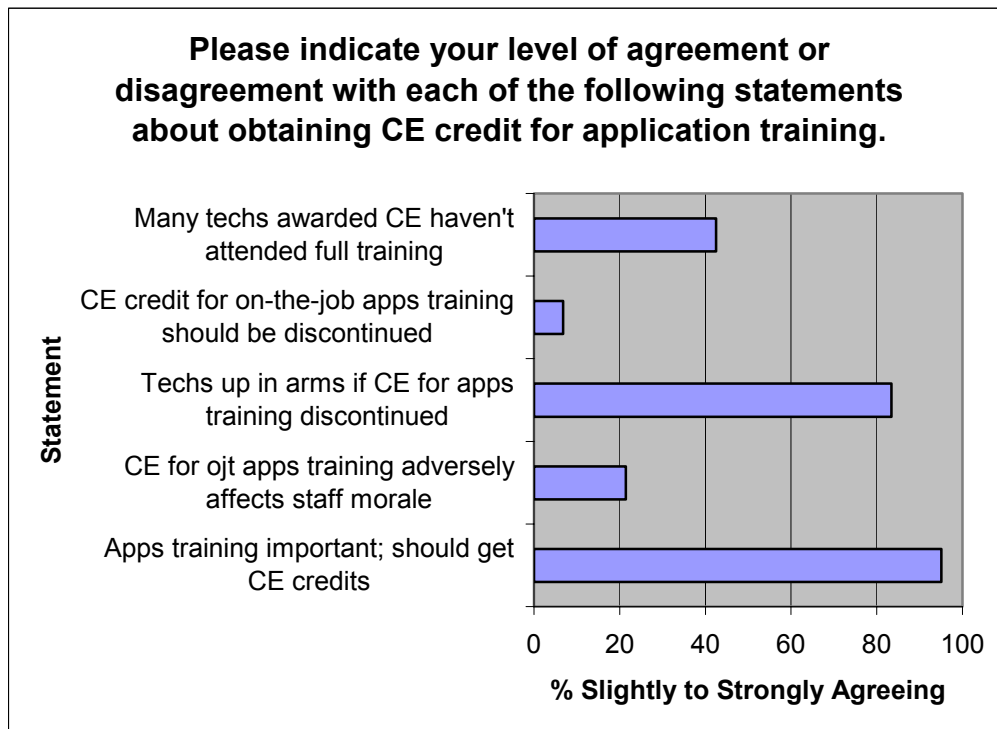

More than half (53%) of Management Chapter members indicated that staff technologists may use computers within their departments for online CE, with 8% saying that the technologists may use the same workstations used for performing procedures. A further 16% of respondents indicated that computers were available for CE purposes but outside the imaging or radiation therapy department.

Twenty-nine percent of Management Chapter members indicated that their staff technologists may not use the Internet for purposes other than CE. Of these managers, 22% reported that non-CE Internet use must be clearly related to the technologist’s job. For 24% of survey respondents, the range of permissible use also included educational purposes and for another 9%, professional development. Finally, about an eighth of these managers said that Internet use for any purpose is “tolerated or encouraged as long as it doesn’t interfere with performance of the technologist’s duties.”

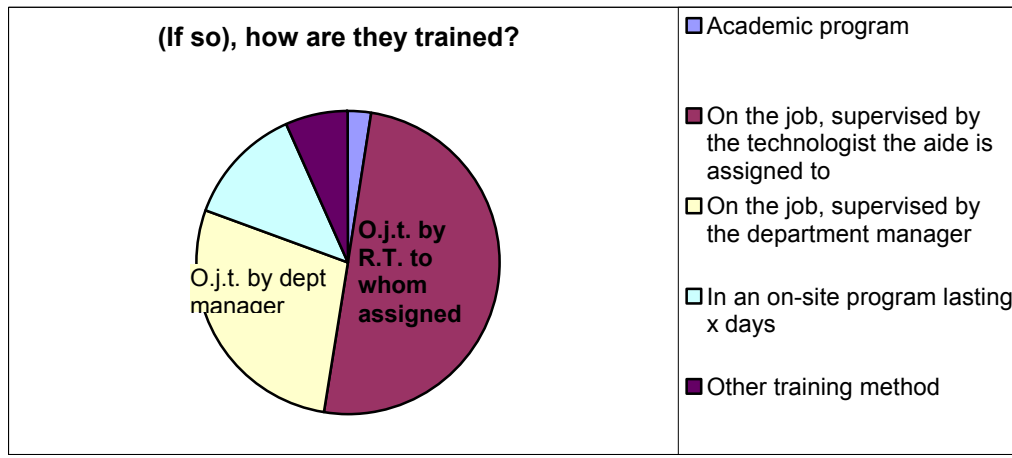

Attitudes towards applications training were generally positive. Substantial majorities of managers agreed with the statements, “Applications training is one of the most important kinds of continuing education; its value should be recognized by the granting of CE credits” and “Technologists in my department would be up in arms if I (or the ARRT) were to discontinue ... CE credit for on-the-job applications training.” Sizeable majorities disagreed with the statements that “Granting CE credit for on-the-job applications training adversely affects staff morale” and “The granting of CE credit for on-the-job applications training should be discontinued.” The only negative indicator was that 42.5% of Management Chapter members agreed with the statement, “Many of the technologists awarded CE credits for on-the-job applications training have not been able to attend the full training session(s).”

Slightly more than half of the facilities where these Management Chapter members work employed R.T. aides, although these employees may not be called by that term.

A large majority (80%) of these facilities train R.T. aides on the job (OJT). Most (64%) of the facilities using OJT entrust training to the technologist to whom a given R.T. aide is assigned. Fewer than 3% of managers reported relying on academic programs to train R.T. aides. Among the 13% of facilities that use an on-site program for R.T. aide training, the length of that program varied from half a day to 90 days, with the median length being 8 days.

More than a third of these Management Chapter members reported that they never employ temporary technologists. Another 47% indicated that they hire short-term staff only “as a temporary expedient until permanent staff can be hired.” Nineteen percent of managers surveyed said that they use temporary workers to fill in for permanent staff who are on leave.

Almost 80% of respondents report that they pay local temps (those “who reside in the local area and commute from their homes to their temporary assignments”) more than they do permanent technologists; only about 1% say they pay local temps less, with the net result that about half of the managers estimate that local temps receive at least 25% higher salary/wages than do the permanent technologists in their department. Taking into account “such factors as health insurance and other benefits”, 61% of these managers feel that local temps’ overall compensation is higher than permanent techs’; 6%, lower; and about a third believe that total compensation comes out about the same for local temps as for permanent techs, all things considered.

Note: Mean amount by which respondents judged local temps’ salary/wages higher than permanent technologists’ salary/wages = 37.8%; median = 24.8%.

Not surprisingly, the contrast between traveling temporary technologists (those “who reside outside the local area and must find temporary housing in the area where their temporary-assignment facility is located for the duration of that assignment”) and permanent staff is even stronger. Ninety percent of managers indicated that traveling temps receive higher salary and/or wages vs. only 1% of respondents who report that their departments pay travelers less than permanent staff. According to those surveyed, the median amount by which traveling temps’ pay exceeds permanent techs’ pay is 42%. Further, consideration of “such factors as temporary housing costs, per diem, health insurance and other benefits” makes the traveler/permanent comparison slightly *more* favorable to traveling temps. In particular, 92% of respondents reported that total compensation to traveling technologists is higher than for permanent staff; less than 1% of managers indicated that compensation is lower for travelers than for permanent staff; and 8% of those surveyed thought that total compensation is roughly equivalent, all things considered.

However, a number of Management Chapter members cautioned in written comments that the pay and other benefits actually received by traveling temps should be distinguished from the much higher amounts paid to temporary staffing agencies.

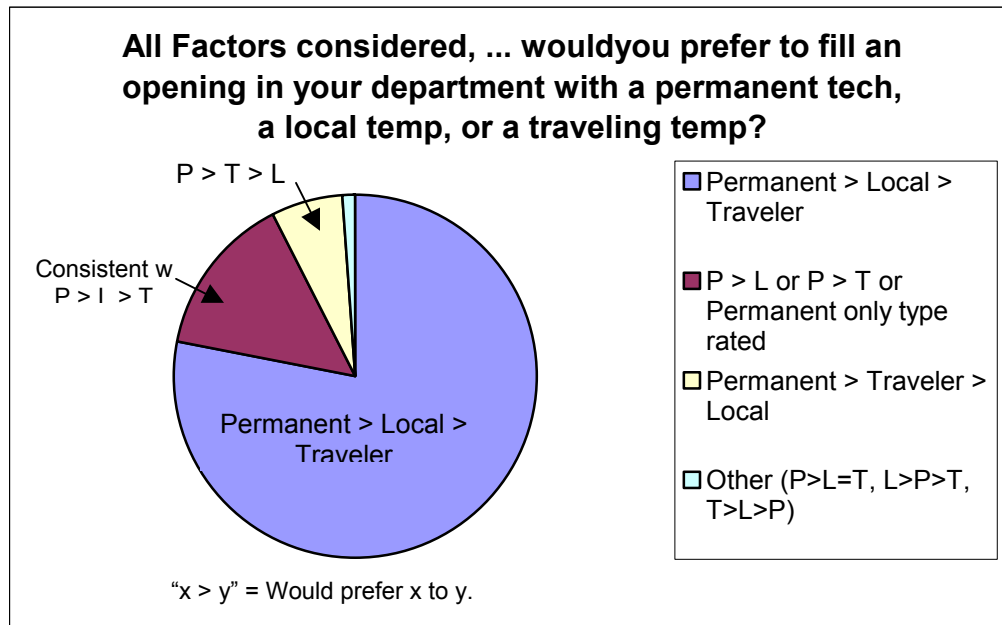

More than 80% of Management Chapter members considered hiring a permanent technologist to be much more cost effective than hiring a local temp, all things (eg, health insurance, retirement, relative productivity, impact on morale, training time and cost,etc.) considered. Another 9% considered permanent staff somewhat more cost effective than local temps.

The vast majority (92%) of managers considered hiring a permanent technologist to be much more cost effective than hiring a traveling temp; another 6% considered the permanent technologist somewhat more cost effective.

More than three-fourths of Management Chapter members preferred hiring a permanent technologist, their second preference was to employ a local temp and they would hire a traveling temp only if they were not able to hire one of the other two types. An additional 14% of managers expressed a preference for a permanent technologist over one of the other two but did not mention the third type; 6% of respondents gave first preference to hiring a permanent technologist, but preferred travelers to local temps.

Several (102) Management Chapter members added comments on the above issues or on other aspects of their managerial roles, and 56 wrote comments beside particular questions on the survey.

## Detailed Results

|  | Total                                   | 670 |       |

The job title of the modal survey respondent was director of (33.8%) or manager of (29.7%) radiation or imaging services (or a comparable designation). However, all levels of administration from senior staff technologist to vice president were represented. Write-in responses for job title in the “other” category included positions such as staff technologist and CEO. Fewer than 1% of the respondents were directors of clinical or educational programs and about 1% were staff technologists.

**Question: For which of the following are you responsible? Check all that apply.**

#### Descriptive Statistics

| Responsibility            | N   | Proportion checking this responsibility |
|---------------------------|-----|---|
| Creating operating budget | 670 | .6851                                   |
| Staff scheduling          | 670 | .7433                                   |
| Disciplinary action       | 670 | .8657                                   |
| Hiring                    | 670 | .8522                                   |

| 7.00  | 63        | 9.4     | 100.0              |
| Total | 670       | 100.0   |                    |

Mean = 4.88; Std. Deviation = 1.72; Median = 4.94

The modal respondent listed six responsibilities (mean and median  $\cong$  five responsibilities), with 84% to 87% having responsibility for disciplinary actions, hiring, and purchasing decisions: 65% to 74% were responsible for creating the capital and operating budgets and for scheduling staff. In addition, 204 (30%) of these managers mentioned 189 responsibilities other than or in addition to the six listed in the survey.

### Other Responsibilities Specified

**Question: About what percent of your time on the job is spent: performing imaging/radiation therapy procedures? Record keeping? Managing/supervising those who perform imaging/radiation therapy procedures? Other (please specify).**

**Descriptive Statistics**

|   | N   | Minimum | Maximum | Mean    | Std. Deviation |
|---|-----|---------|---------|---------|----------------|
| % time on job performing ... procedures   | 552 | 0       | 99      | 15.48   | 23.220         |
| % time on job performing recordkeeping    | 585 | 0       | 100     | 24.74   | 18.390         |
| % time mng/superv those who do procedures | 612 | 0       | 100     | 47.76   | 27.429         |
| % time on other tasks                     | 324 | 0       | 100     | 36.92   | 28.177         |
| Sum of %'s                                | 647 | .00     | 250.00  | 99.2349 | 17.99838       |
| Valid N (listwise)                        | 260 |         |         |         |                |

Note: Mean percentages do not add up to 100% because some (5.6%) respondents' entries did not add up to 100%; this was probably intentional in most cases.

More than half (54%) of respondents spend at least some of their on-job time “performing imaging or radiation therapy procedures.” Of those who do, most (72%) spend only a quarter of their time or less performing procedures, with an overall median of 1% and a mean of 13%. Close to half of the respondents' time (46%, on average) is spent managing/supervising those who perform procedures.

**Descriptive Statistics**

| Type of Institution in Which Primary Workplace Located | Proportion listing as primary workplace |
|--|---|
| Hospital   | .6955                                   |
| Clinic   | .0851                                   |
| Private physician practice                             | .1000                                   |
| Government agency                                      | .0104                                   |
| Educational institution                                | .0284                                   |
| Other type institution                                 | .1045                                   |
| Valid N (listwise)                                     | 670                                     |

Note: Proportions add up to slightly more than 1.00 because a few respondents listed multiple types of institution.

Nearly 70% of these managers work in a hospital setting, 10% in private physician practices and 9% in clinics.

**Question: How large is the institution where you work?**

**Descriptive Statistics**

|   | N   | Minimum | Maximum | Mean    | Std. Deviation | Median |
|---|-----|---------|---------|---------|----------------|--------|
| # beds in institution where work            | 455 | 0       | 3000    | 298.76  | 256.652        | 249.3  |
| # exams per month in institution where work | 285 | 35      | 100000  | 5629.47 | 11072.718      | 2415.6 |
| # employees in institution where work       | 396 | 1       | 200000  | 633.79  | 10051.674      | 49.1   |
| Valid N (listwise)                          | 160 |         |         |         |                |        |

**Number of Beds in Respondents' Institutions**

Based on average percentile across the three size measures.

Management Chapter members work in institutions that vary greatly in size from zero to 3,000 beds, from 35 to 100,000 exams performed per month and from 1 to 5,000 employees. (One respondent, a regional vice president for an international corporation, listed 200,000 employees.) For a given measure, the median size was 238 beds or 2,130 exams per month or 45.3 employees.

**Question: How many years (not including precertification employment or internships) have you been employed (not necessarily continuously) in the radiologic sciences?**

| Years in Profession | Frequency | Percent | Cumulative Percent |
|---------------------|-----------|---------|--------------------|
| < 1                 | 2         | 0.3     | 0.3                |

| Total non-missing   | 658       | 100.0   |                    |
| Missing             | 12        | 1.8     |                    |
| Total               | 670       |         |                    |

Mean (treating ">20" as 25 years) = 22.1 years. Median = 23.1 years

Almost three-quarters of Management Chapter members have been employed in the radiologic sciences for more than 20 years, with the mean time in the profession being 22.1 years and with half of the respondents working in the radiologic sciences for 23.1 years or more.

**Question: How many years have you held (not necessarily continuously) a managerial position in the radiologic sciences?**

| Years as Manager  | Frequency | Valid Percent | Cumulative Percent |
|---|-----------|---------------|--------------------|
| < 1   | 4         | .6            | .6                 |
| 1-2   | 33        | 5.0           | 5.6                |
| 3-5   | 76        | 11.6          | 17.2               |
| 6-10  | 130       | 19.8          | 37.0               |
| 11-15   | 164       | 24.9          | 61.9               |
| 16-20   | 99        | 15.0          | 76.9               |

| Total valid   | 658       | 100.0         |                    |
| Missing   | 8         | 1.2           |                    |
| NA; I've never held a managerial position*                                | 2         | .3            |                    |
| NA; my managerial positions have all been outside the radiologic sciences | 2         | .3            |                    |
| Total   | 670       | 100.0         |                    |

Mean = 13.8 years. Median = 13.1 years.

\*Both of these respondents indicated that they have been Management Chapter members for 6-10 years and more than 20 years, respectively.

The average Management Chapter member has held a managerial position in the radiologic sciences for 13.8 years out of a total of 22.1 years in the profession.

**Question: How many years have you held your current position?**

| <b>Years in Current Position</b> |           |               |                    |
|----------------------------------|-----------|---------------|--------------------|
|                                  | Frequency | Valid Percent | Cumulative Percent |
| < 1                              | 56        | 8.5           | 8.5                |
| 1-2                              | 129       | 19.5          | 28.0               |
| 3-5                              | 177       | 26.8          | 54.8               |
| 6-10                             | 120       | 18.2          | 73.0               |
| 11-15                            | 87        | 13.2          | 86.2               |
| 16-20                            | 37        | 5.6           | 91.7               |
| > 20                             | 55        | 8.3           | 100.0              |
| Total non-missing                | 661       | 100.0         |                    |
| Missing                          | 9         | 1.3           |                    |
| Total                            | 670       | 100.0         |                    |

Mean = 5.6 years. Median = 5.0 years.

The average respondent has been in his or her current position for 5.6 years or about 40% of his or her total career as a radiologic sciences manager.

**Question: In your current position, how many people (radiologic technologists and others, not including yourself) do you supervise?**

| <b>Number of People Respondents Supervise</b> |           |               |                    |
|---|-----------|---------------|--------------------|
|   | Frequency | Valid Percent | Cumulative Percent |
| None  | 33        | 5.0           | 5.0                |
| 1-2   | 18        | 2.7           | 7.7                |
| 3-5   | 42        | 6.4           | 14.1               |
| 6-10  | 70        | 10.6          | 24.7               |
| 11-20   | 117       | 17.7          | 42.4               |
| 21-50   | 205       | 31.1          | 73.5               |
| 51-100  | 116       | 17.6          | 91.2               |
| >100  | 59        | 8.8           | 100.0              |
| Total non-missing                             | 660       | 100.0         |                    |
| Missing                                       | 10        | 1.5           |                    |
| Total   | 670       | 100.0         |                    |

Median = 27.8. In this case, the mean did not provide useful information, given that one respondent's institution had 200,000 employees and two others, 5,000 employees. Therefore, the upper bound of the ">100" interval may be very high.

These managers supervise from zero to more than 100 people (radiologic technologists and others), with about half supervising 28 or fewer people.

**Question: In what modalities do the R.T.s you supervise practice? Check all that apply.**

**Descriptive Statistics**

| Modality                    | Proportion who Supervise Technologists in this Modality |
|-----------------------------|---|
| Radiography                 | .7881   |
| Radiation therapy           | .1224   |

|  | Total   | 670 | 100.0 |
|  | Ultrasound and US plus other modalities         | 55  | 8.2*  |

\*61.8% of those who specified one or more "other" modalities.

Substantial majorities of managers supervise radiographers, mammographers and computed tomography (CT) specialists. About half supervise nuclear medicine technologists and magnetic resonance (MR) specialists; only about an eighth supervise radiation therapists. More than half mentioned specialties other than the six on the checklist provided. Of 89 respondents specifying other specialties, more than 60% mentioned ultrasound, either alone or in combination with other specialties.

## Perspectives on Current Professional Issues

**Question: What level of access to online CE do the staff technologists in your department have?**

### Staff Technologists' Level of Access to Online CE

| Level of Access  | Frequency | Valid Percent | Cumulative Percent |
|--|-----------|---------------|--------------------|
| Not allowed to obtain CE online, even on their own time  | 14        | 2.2           | 2.2                |
| May obtain their CE online, but not at the workplace   | 232       | 37.0          | 39.2               |
| May obtain CE online using workplace computers, but must count the time spent doing so as "break" time | 104       | 16.6          | 55.8               |
| May obtain CE online using workplace computers and may count the time spent doing so as on-job time    | 253       | 40.4          | 96.2               |
| Other policy with respect to staff tech access to online CE  | 23        | 3.7           | 99.9               |
| May count as on-job time + other policy  | 1         | 0.2           | 100.0              |
| Total non-missing  | 627       | 100.0         |                    |

| Provide in-house CE  | 1         | .1      |
| Subscribed to Sinclair/ASRT for all technologists  | 1         | .1      |
| Technologist may not use computer at work for any internet activities, including CE.   | 1         | .1      |
| Technologists are encouraged to obtain continuing education through online sources. In fact, I research sites for CE for them. I also print articles & tests for them when I find them, esp'ly if they are free. | 1         | .1      |
| Technologists may do CE online on two computers not in the work area on their own time or if work is done. Example -- slow day.  | 1         | .1      |
| Therapists attend local & national meetings for CE with full funding.  | 1         | .1      |
| Using workplace, may count time if permitted. Time is not set aside.   | 1         | .1      |
| We encourage online CE, but don't have the computer availability to do it at work.   | 1         | .1      |
| We reimburse for CEs.  | 1         | .1      |
| Total  | 670       | 100.0   |

Policies concerning staff technologist access to online continuing education (CE) varied considerably. Forty percent of the Management Chapter members reported that their staff technologists may obtain their CE online using workplace computers and count the time as on-job time. However, 39% said that staff technologists may not obtain CE online at the workplace, and another 17% reported that technologists may access online CE at the workplace but must count the time as break time, personal time or unpaid leave.

**Question: Which computers are the technologists you supervise permitted to use to obtain online CE? Please check all that apply.**

**Descriptive Statistics**

|  | Proportion checking |
|--|---------------------|
| Computers OK for Online CE                     |                     |
| Their own computers at home                    | .7985               |
| Workplace computers outside department         | .1597               |
| Workplace computers within department          | .4507               |
| Same consoles used for procedures              | .0791               |
| Other computers that can be used for online CE | .0433               |
| Valid N (listwise)                             | 670                 |

More than half (53%) of Management Chapter members indicated that staff technologists may use computers within their departments for online CE, with 8% saying that the technologists may use the same workstations used for performing procedures. A further 16% of respondents indicated that computers were available for CE purposes but outside the imaging or radiation therapy department.

**Question: Please indicate your agreement or disagreement with each of the following statements about obtaining CE credit for applications training.**

**Descriptive Statistics**

| Statement   | N   | Mean   | Std. % Who Deviation Agree w Statement |
|---|-----|--------|--|
| Apps training important; should get CE credits          | 633 | 1.7188 | .97755 95.1                            |
| CE for OJT apps training adversely affects staff morale | 616 | 4.5990 | 1.48705 21.4                           |
| Techs up in arms if CE for apps training discontinued   | 620 | 2.1919 | 1.35837 83.4                           |
| CE credit for OJT apps training should be discontinued  | 622 | 5.3055 | 1.03867 6.8                            |
| Many techs awarded CE haven't attended full training    | 598 | 3.8980 | 1.50642 42.5                           |
| *FAVAPPCE   | 586 | 1.4595 | .83104                                 |
| Valid N (listwise)                                      | 586 |        |  |

\*FAVAPPCE = a measure of managers' overall favorable perceptions of CE credit for applications training. The value was computed by adding favorable and subtracting unfavorable scores, weighting by the extremity of the statement. Scores range from -2.5 (highly unfavorable) to +2.5 (highly favorable).

For individual items, 1 = Strongly agree, 2 = Agree, 3 = Slightly agree, 4 = Slightly disagree, 5 = Disagree, 6 = Strongly disagree.

© Copyright 2003 by the American Society of Radiologic Technologists. All rights reserved.

Attitudes towards applications training were generally positive. Substantial majorities of managers agreed with the statements, “Applications training is one of the most important kinds of continuing education; its value should be recognized by the granting of CE credits” and “Technologists in my department would be up in arms if I (or the ARRT) were to discontinue ... CE credit for on-the-job applications training.” Sizeable majorities disagreed with the statements that “Granting CE credit for on-the-job applications training adversely affects staff morale” and “The granting of CE credit for on-the-job applications training should be discontinued.” The only negative indicator was that 42.5% of Management Chapter members agreed with the statement, “Many of the technologists awarded CE credits for on-the-job applications training have not been able to attend the full training session(s).”

**Distribution of Overall Positive Feelings About CE Credits for Applications Training**

| Overall Favorable Feelings Toward CE for Applications Training | Frequency | Valid Percent | Cumulative Percent |
|--|-----------|---------------|--------------------|
| -1.91 to -1  | 9         | 1.5           | 1.5                |

**Question: Please add here any other comment you would like to share about CE credit for applications training.**

| Comment  | Frequency | Percent  |
|--|-----------|----------|
|  | Missing   | 559 83.4 |
| (Should apply to RIS, CIS, PACS, etc.) CA only gives CEU credits for "the application of xray to the human body". Starting Jan 2003 ultrasound, nuc med, MRI   | 1         | .1       |
| Actual hands on training is far superior to second hand knowledge from newly trained personnel   | 1         | .1       |
| Application training is one of the few hands-on CEU available, it is quality; it is specialty CEU  | 1         | .1       |
| Application training should be awarded CE only if learning outcomes are quantifiable   | 1         | .1       |
| Applications CE should be allowed but not as much as received. Ex techs receive 32 CEs for 4 days - too much   | 1         | .1       |
| Applications personnel do not allow entire staff opportunity to obtain applications training   | 1         | .1       |
| Applications training has always been the most applicable training to our job.   | 1         | .1       |
| Applications training is better with 'hands on' and if the technologist can benefit from CE credits, that individual could be considered a resource and responsible for other staff training of equipment. | 1         | .1       |
| Applications training is extremely important & should be recognized as a learning & growth opportunity   | 1         | .1       |
| Applications training is performed using commercial focused views which may not provide skill sets to advance the professional or profession   | 1         | .1       |
| Applications training is so infrequent that no tech should rely on it for CE credits. it is an additional welcome opportunity for CE though  | 1         | .1       |
| Applications training is vitally important whether CE credits is or is not offered   | 1         | .1       |
| Applications training, I strongly feel that CE credits should be approved.   | 1         | .1       |
| Apps is sometimes fragmented or limited to only a few  | 1         | .1       |
| Apps training does provide education   | 1         | .1       |

|  |   |    |
|--|---|----|
| Apps training is very intense w/a considerable amount of info presented in a short time.   | 1 | .1 |
| Apps training keeps the techs fresh & up to date and always learn more than just how to run the new machine  | 1 | .1 |
| Apps training should allow for techs to rotate thru the duration and receive all necessary info/training   | 1 | .1 |
| At my facilities you must attend the complete session for CE credits   | 1 | .1 |
| Believe should be aimed if you approved content  | 1 | .1 |
| CE are a continuing stress point among RTS & the shortage & overworking of existing RTS will self destruct the system  | 1 | .1 |
| CE credit for applications training should be continued  | 1 | .1 |
| CE credit for apps should pertain to the modality they work in   | 1 | .1 |
| CE credit for this needs to be changed. Difficult to have everybody there for every bit of training. Lots of constraints need to continue to get work done being the busiest                           | 1 | .1 |
| CE credit should be given to those who truly attend the training credit = hrs spent - no exceptions  | 1 | .1 |
| CE credits are given to vendors on application training too easily. the amount of training- for the amount of credits needs to be adjusted   | 1 | .1 |
| CE credits should be awarded but more actual time on the application should be monitored   | 1 | .1 |
| CE credit for applications is a "benefit" for my employees & they are excited about it. It is a stressful time & makes it tolerable during change.   | 1 | .1 |
| CEUs should be granted relative to amount of time spent training   | 1 | .1 |
| Clearly if the product is new on the market with the latest, greatest, unfamiliar components I think that credits are OK. [Slightly agreed with elim of CE for apps trng.]                             | 1 | .1 |
| Directly related to improving/maintaining competency therefore consistent w/goals of CE  | 1 | .1 |
| Due to capital budget limitations new equip was a source of celebration & higher morale. Everyone wanted to be part of the process   | 1 | .1 |
| Due to strict health info management regulations most staff do not have Internet access  | 1 | .1 |
| During apps due to staffing not all are able to attend training. We train the trainers   | 1 | .1 |
| Each training course outline should be approved for appropriate CE credits   | 1 | .1 |
| Excessive credit received for limited time training  | 1 | .1 |
| Fot (?) at they only get credit for time attended  | 1 | .1 |
| Given the technological sophisticated equipment utilized in imaging services, it is essential that apps training be recognized for CE credits  | 1 | .1 |
| Granting of CE credits for applications training should continue   | 1 | .1 |
| Hours awarded need to be more realistic (inflated now). Tighter control of attendance is needed. Limit # of hrs of apps training applicable for each biennium  | 1 | .1 |
| I believe it is a managers role to decide who receive which applications for CE  | 1 | .1 |
| I believe that is appropriate to give credit for OJT applications training. it does need to have specific objectives to complete   | 1 | .1 |
| I believe that the tech should attend the whole training and it should be worthwhile. I do not believe that it is 1 hr = 1 CE  | 1 | .1 |
| I believe they should attend the full OJT training sessions to qualify for ce credits  | 1 | .1 |
| I did applications for [name of company over the course of 4 yrs. you cram a lot info into someone in a short time. Those credits are necessary! If credits drop so will productivity.                 | 1 | .1 |
| I don't understand why this is such a big topic of conversation. Techs can get CE credits for almost anything  | 1 | .1 |
| I have always made sure the technologists spent the full time with apps training specialist  | 1 | .1 |
| I think any formal training should be granted ARRT credits. ARRT makes it difficult to get in-services credit  | 1 | .1 |
| I think ASRT could keep by giving info specific requirements for apps & ????   | 1 | .1 |
| I think it's ridiculous to even consider not allowing ce credits for apps training, whose bright idea was this? Must be the same intelligent person who required Master's degree for program directors | 1 | .1 |
| I think the applications person should be responsible to see that all names have attended  | 1 | .1 |
| I think those receiving CE credits for applications training should actually use that  | 1 | .1 |

|   |   |    |
|---|---|----|
| equipment - ex MRI tech should not get credit for mammo apps  |   |    |
| If apps training CE is still issued the # of credits allowed should be reduced (maybe 25% of what is now given).  | 1 | .1 |
| If staff unable to attend apps training full session (8 hours) w/i limited days, we have prorated CEU based on hours of attendance  | 1 | .1 |
| If stricter adherence to full attendance is the issue, that should be addressed rather than discontinuing it altogether   | 1 | .1 |
| It's done for physicians, nurses and other allied health professions. Seems to be industry standard   | 1 | .1 |
| It is a great benefit & encouragement to learn  | 1 | .1 |
| It is actually unfair in that many "vendors" require all day to get CE & just becomes available to only 1 or 2 - others are left out  | 1 | .1 |
| It is difficult for all techs to get the training; some get left out  | 1 | .1 |
| It is the managers responsibility to that therapists can attend all necessary applications training   | 1 | .1 |
| It should be considered strongly to allow these credits   | 1 | .1 |
| Learning in any manner is vital. All new equipment requires application and learning  | 1 | .1 |
| Learning new equipment is an integral part of the tech's job description & should be not only rewarded w/CE credits, but also encouraged  | 1 | .1 |
| Limiting the number of techs to receive training and CE credit is very disheartening and cause discontent   | 1 | .1 |
| More than one apps session should be held or scheduled to include all employees involved with the specific modality/equipment use   | 1 | .1 |
| Most apps personnel will only grant to those who attend entire session. Many vendors now offer extended apps to train several sessions  | 1 | .1 |
| Most vendors are very serious about their CE opportunities. it has been my experience that techs only rec'd credit for the hours attended   | 1 | .1 |
| Much stricter than in the past  | 1 | .1 |
| My view is that technology continually grows & so must technologists. It is appropriate that CE credit is given for Apps training.  | 1 | .1 |
| New open MRI trained one CT tech he learned more and is better able to provide patient care due to training. No DR readings could compare to the apps provided, wouldn't you agree?             | 1 | .1 |
| No charge from vendors or ASRT  | 1 | .1 |
| Not aware of the issue  | 1 | .1 |
| Nothing, other than there is absolutely no reason to take it away   | 1 | .1 |
| Obtaining credits for applications encourages staff to attend full training session which assists them to be more competent   | 1 | .1 |
| On the job application must be considered as all ed activities-participants must complete program for credit. If widely viewed as impossible then downgrade overall credit to 1/2 normal amount | 1 | .1 |
| On the job or onsite at vendor apps CE should only be awarded for those currently practicing in the modality-period!  | 1 | .1 |
| ONLY A FEW OF THE TECHNOLOGISTS CAN BE AWARD CE CREDIT. COMPANY WILL ONLY WORK W/LIMITED TECHNOLOGIST NOT ALL PLEASE CONTINUE THIS PRACTICE   | 1 | .1 |
| Providers should assure content and materials provide sufficient info & references -- RT should not be short changed.   | 1 | .1 |
| Recently had GE CT training -they would give CME credit because "entire" 3 day commitment staff couldn't meet. Said it was ASRT guideline-they did attend 8 hours each                          | 1 | .1 |
| Some vendors don't offer it since they didn't seek approval. This upsets all staff.   | 1 | .1 |
| Applications doesn't just show equipment, it gets great discussion & pertinent refresher of concepts  | 1 | .1 |
| Staff should receive CE for apps training. taking that away would be punishing them for no reason   | 1 | .1 |
| Staff will attend any applications training if CEs are awarded  | 1 | .1 |
| Taking away CEs for O.J.T./apps will worsen the shortage of RTS in advanced modalities  | 1 | .1 |

|   |     |       |
|---|-----|-------|
| Technologists should be awarded CE credits only for training they attend  | 1   | .1    |
| Testing should be related to applications training via 3rd party or online feedback. Not just for attending   | 1   | .1    |
| The availability of training is never convenient for all staff especially 2nd/3rd/weekend staff - reps give excessive CE credits for actual time of training ex 12 credits for 2 contact hours  | 1   | .1    |
| The entire session must be completed for credits to be given/allow only a certain number of credits for apps training   | 1   | .1    |
| The experience with on job applications   | 1   | .1    |
| The hospital/organization pays a lot for apps training in addition to the regular apps that "go along" w/new equipment CE credits an important feature as to weather or not to purchase additional apps time                                    | 1   | .1    |
| The RTs in our private practice do not have the opportunity to earn CE during apps  | 1   | .1    |
| The s/b an evaluation individually to grade each on knowledge retained & actual hrs spent w/apps specialist. No flat # across board   | 1   | .1    |
| The trainers are very specific about attendance parameters for apps training. You must complete all of it to receive CE.  | 1   | .1    |
| There do need to be standards-a post test would be useful to submit   | 1   | .1    |
| There should only apply to technologists in that modality an MRI should not go to CT apps for CEUs  | 1   | .1    |
| They should not be granted unless completed in full by the staff member and have some kind of competency testing upon completion.   | 1   | .1    |
| This does not directly apply to my situation so i merely gave my opinion  | 1   | .1    |
| This is a very important part of training & self-fulfillment which is usually a free benefit to my staff. Taking this away would hurt!  | 1   | .1    |
| This is one feature of CE credit that benefits hospitals or training documentation  | 1   | .1    |
| This is very valuable to both techs and employers - it is mandated by JCAHO, techs should get credit for that learning  | 1   | .1    |
| Training definitely enhances tech ability to provide better job performance patient care  | 1   | .1    |
| Tumor board conferences should be recognized as continuing education and credits should be awarded  | 1   | .1    |
| Unless there is a permanent disability or other barriers, I think all techs have credits available to them through seminars, internet, mail   | 1   | .1    |
| Unless you can carry the equipment to your next job, apps CEs are not relevant  | 1   | .1    |
| Valuable tool as it is impossible to get staff out of office for training - wonderful to have it in-house   | 1   | .1    |
| Very valuable & probably training most relevant to job  | 1   | .1    |
| When trainers are scheduled- many part-time employees do not qualify for partial credit - why not?  | 1   | .1    |
| With digital imaging, PACS, and networking, vendors are introducing equipment that requires new skill sets for staff. they have a responsibility to educate in its use and how it relates to the workflow.                                      | 1   | .1    |
| With electronic imaging and distribution, many technologists are not only learning about the equipment but about how to perform their roles in a new way. Need to know new ways to troubleshoot problems. Almost need an entirely new skill set | 1   | .1    |
| With GE, you attend all of the applications training or you do not get credit - period  | 1   | .1    |
| Total   | 670 | 100.0 |

**Question: Does your facility employ R.T. aides?**

|             | Frequency | Valid Percent | Cumulative Percent |
|-------------|-----------|---------------|--------------------|
| No          | 299       | 47.0          | 47.0               |

Slightly more than half of the facilities where these Management Chapter members work employed R.T. aides, although these employees may not be called by that term.

**Question: If your facility employs R.T. aides (or persons you think might be considered R.T. aides), how are they trained?**

| Training Method  | Frequency | Percent Checking |
|--|-----------|------------------|
| Academic program   | 9         | 2.7              |
| On the job, supervised by the technologist the aide is assigned to | 170       | 51.2             |
| On the job, supervised by the department manager                   | 96        | 28.9             |
| In an on-site program lasting x days                               | 43        | 13.0             |
| Other training method  | 23        | 6.9              |
| Total Valid (from 332 cases)                                       | 341       | 102.7            |
| Missing  | 338       | 50.4             |
| Total  | 670       | 100.0            |

**Length of RT Aide Training Program, in Days**

| Length of Training Program | Frequency | Valid Percent | Cumulative Percent |
|----------------------------|-----------|---------------|--------------------|
| .50 to 2 days              | 6         | 7.7           | 15.4               |
| 2.01 to 5 days             | 12        | 15.4          | 30.8               |
| 5.01 to 10 days            | 25        | 32.1          | 62.8               |
| 10.01 to 15 days           | 5         | 6.4           | 69.2               |
| 15.01 to 20 days           | 10        | 12.8          | 82.1               |
| 20.01 to 30 days           | 7         | 9.0           | 91.0               |
| 30.01 to 40 days           | 4         | 5.1           | 96.2               |
| 40.01 to 90 days           | 3         | 3.8           | 100.0              |
| Total non-missing          | 78        | 100.0         |                    |
| Missing                    | 592       | 88.4          |                    |
| Total                      | 670       |               |                    |

Mean = 15.2 days; std. dev. = 16.6 days; median = 8.0 days.

Note: Multiplied number of weeks by 5 and divided number of hours by 8 in computing number of days.

A large majority (80%) of these facilities train R.T. aides on the job (OJT). Most (64%) of the facilities using OJT entrust training to the technologist to whom a given R.T. aide is assigned. Fewer than 3% of managers reported relying on academic programs to train R.T. aides. Among the 13% of facilities that use an on-site program for R.T. aide training, the length of that program varied from half a day to 90 days, with the median length being 8 days.

| Total   | 670       |               |                    |

Mean = +37.8%; median = 24.8%

Almost 80% of respondents report that they pay local temps (those “who reside in the local area and commute from their homes to their temporary assignments”) more than they do permanent technologists; only about 1% say they pay local temps less, with the net result that about half of the managers estimate that local temps receive at least 25% higher salary/wages than do the permanent technologists in their department. Taking into account “such factors as health insurance and other benefits”, 61% of these managers feel that local temps’ overall compensation is higher than permanent techs’; 6%, lower; and about a third believe that total compensation comes out about the same for local temps as for permanent techs, all things considered.

### Other Local Temp/Permanent Pay Comparison

|  | Frequency | Percent |
|--|-----------|---------|
| Missing  | 624       | 93.2    |
| Considering benefits are not included with per diem their pay is comparable to staff   | 1         | .1      |
| Do not use -- Temps feel they can pick & choose work assignments. I feel I am lucky-- I have used Agency techs in cath lab & non-invasive cardiology -- or from a sister hospital, paying these techs x dollars more per hour. | 1         | .1      |
| Do not use or have not used local temps  | 7         | 1.0     |
| Don't know   | 4         | .6      |
| Don't know what "temps" make. I know only what I pay the company.  | 1         | .1      |
| Have not used either in several years  | 1         | .1      |
| I'd rather spend the \$6000 on bonus or relocation for new hire  | 1         | .1      |
| I'm not sure what the temps make its not common knowledge. The director is aware of that.  | 1         | .1      |
| I don't know what the techs make, I only know what we pay the company  | 1         | .1      |
| I haven't used local temps for 3 years   | 1         | .1      |
| If used temps would be about 10% higher. But wages here (this facility) are about 25-30% lower than ASRT survey.   | 1         | .1      |
| Local temp don't get any benefits  | 1         | .1      |
| Local temps not available  | 1         | .1      |
| Local temps paid more but wage is not known by me ... per contract stipulations  | 1         | .1      |
| N/A  | 2         | .3      |
| No info on temps   | 1         | .1      |
| Not privy to that info   | 1         | .1      |
| Perm = \$35/hr Local temp = \$65   | 1         | .1      |
| Perm rad staff tech -- \$20/hour. Local temp tech - \$45/hr  | 1         | .1      |
| Retired  | 1         | .1      |
| The above is compensation paid to the temp agency. The temp themselves are paid slightly higher than a permanent tech taking into account benefits.  | 1         | .1      |
| The high compensation for local temps is partly the reason why the shortage is so great. Technologists are jumping around from one site to another.  | 1         | .1      |
| There are no local temp agencies in our area   | 1         | .1      |
| Traveling temps' compensation hourly unknown -- only familiar with monthly invoice amount of the agency  | 1         | .1      |
| Try never to have temps again. Had used locums for 1.5 years. Bad situation when its not temp  | 1         | .1      |
| Unable to compute, as the ave. traveler does not get paid but a fraction compared to the invoiced amount going to the company. Same is true of "local" temps. We save lodging  | 1         | .1      |
| Unknown -- will not hire local temps.  | 1         | .1      |
| Use agency and pay per hour to staffing company. No benefits and staff within commuting distance.  | 1         | .1      |
| Use per diem staff at same rate  | 1         | .1      |
| We do not have any local temps in our area   | 2         | .3      |
| We do not use local temps except if they are on-call staff. They receive the same pay as staff.  | 1         | .1      |
| We don't use local temps   | 1         | .1      |
| We have no local temps at this time. We have 2 per diems who work 36+ hours a month.   | 1         | .1      |
| We pay about the same pay and they receive no health insurance and other benefits.   | 1         | .1      |
| Will not use local temps   | 1         | .1      |
| Total  | 670       | 100.0   |

**Question: How does the average salary or hourly wage that traveling temps (“those who reside outside the local area and must find short-term housing for the duration of the assignment”) receive compare to the average received by permanent staff with comparable credentials?**

| Traveling Temps' Compensation in Comparison to Permanent Techs' | Proportion Checking | Percent of Those Making Comparison |
|---|---------------------|------------------------------------|
| Salary/wages x % higher than permanent techs' average           | .2060               | 89.6                               |
| Salary/wages within 5% of permanent techs' average              | .0209               | 9.1                                |
| Salary/Wages x % lower than permanent techs' average            | .0030               | 1.3                                |
| Total comparing average salary or hourly wage                   | .2299               | 100.0                              |
| Considering other factors, travelers' total comp higher         | .2478               | 98.4                               |
| Considering other factors, total comp equivalent                | .0224               | 8.9                                |
| Considering other factors, travelers' total comp lower          | .0015               | 0.6                                |

| Total   | 670       |               |                    |

Mean = +62.8%; median = 41.7%

Not surprisingly, the contrast between traveling temporary technologists (those “who reside outside the local area and must find temporary housing in the area where their temporary-assignment facility is located for the duration of that assignment”) and permanent staff is even stronger. Ninety percent of managers indicated that traveling temps receive higher salary and/or wages vs. only 1% of respondents who report that their departments pay travelers less than permanent staff. According to those surveyed, the median amount by which traveling temps’ pay exceeds permanent techs’ pay is 42%. Further, consideration of “such factors as temporary housing costs, per diem, health insurance and other benefits” makes the traveler/permanent comparison slightly *more* favorable to traveling temps. In particular, 92% of respondents reported that total compensation to traveling technologists is higher than for permanent staff; less than 1% of managers indicated that compensation is lower for travelers than for permanent staff; and 8% of those surveyed thought that total compensation is roughly equivalent, all things considered.

However, a number of Management Chapter members cautioned in written comments that the pay and other benefits actually received by traveling temps should be distinguished from the much higher amounts paid to temporary staffing agencies.

### Other Comparisons Between Traveling and Permanent Technologists

|   | Frequency | Percent |
|---|-----------|---------|
| Missing   | 618       | 92.2    |
| Agency tech higher than independent coordinator   | 1         | .1      |
| Agency techs do not apply to this facility  | 1         | .1      |
| Do not use traveling temps  | 17        |         |
| Do not use traveling temps (too expensive)  | 1         | .1      |
| Don't know  | 1         | .1      |
| Don't use temps   | 1         | .1      |
| Don't use traveling technologist -- only use local.   | 1         | .1      |
| Have never hired a traveling temp so don't know, but would think they are higher cost   | 1         | .1      |
| Have no idea how much of the compensation they receive, we are paying \$70+/hr for temps  | 1         | .1      |
| I don't know what the techs make, only what we pay to the company   | 1         | .1      |
| Must pay meals, lodging, and other expenses   | 1         | .1      |
| N/A   | 6         | .9      |
| No comment -- no traveling temps at our facility.   | 1         | .1      |
| No info on temps  | 1         | .1      |
| No travel temps   | 1         | .1      |
| No traveling temps in department  | 1         | .1      |
| Not familiar w/traveling temps salary-only familiar w/cost to facility for their services-which is very marked far higher than for permanent technologists                          | 1         | .1      |
| Not privy to info. Use temp company.  | 1         | .1      |
| Only used local free lancers  | 1         | .1      |

| patient's disease correctly to maximize payment. This by far is the most pressing issue out there.  |   |    |
| Being a Lead Tech I felt like I wasn't able to give as much info on this survey as someone directly in management. Hope my info was useful.   | 1 | .1 |
| Have hired agency RNs. very costly to org but necessary. Would hire rad techs if operations were dependent. Agency RNS were well trained but resented by staff because of pay structure   | 1 | .1 |
| I am disappointed as to the way credits are earned. Directed readings do not allow the education we need. Answers are shared (although I cannot prove it) so the only person that learns anything is the true reader. I would like to see that at least 12 credits earned by physically attending lectures.   | 1 | .1 |
| I am very focused on my employees. I have only used PRN employees during one year when RT crisis at all time high & stress levels were high for my staff. As a director, I would like more interaction w/ managers to see what everyone else is doing.... I have been at one facility for 20 yrs & have limited insight to others & self trained.   | 1 | .1 |
| I cannot be of much help as I retired in July 2002.   | 1 | .1 |
| I have 6 part time technologists all with at least 10 yrs experience. We do not pay as well as hospitals but we are very flexible with hours  | 1 | .1 |
| I have only just retired from my position due to health issues. I have filled this questionnaire out as it has been valid up until less than one month ago. I leave it to you to include the data or not.   | 1 | .1 |
| I hope this information helps.  | 1 | .1 |
| I left management to pediatric coordinator last time. This occurred in July 2002  | 1 | .1 |
| I manage 2 depts 30 minutes from each   | 1 | .1 |
| I think we should dramatically increase the volume of students & new grads - increase the \$ for RTs (new grads) to \$18-20 and put agencies out of business  | 1 | .1 |
| I worked for 23 years in a large 800-bed hospital. We had 6 "technical assistants" who were trained in our hospital for their didactic & clinical instruction. They are excellent and still employed in that capacity for 20 years. A tech can be much much more productive. They are all working in diagnostic radiography.  | 1 | .1 |
| Id be interested in responses on q24 as I'd like to begin the practice of having tech aides and how other facilities train & utilize these positions  | 1 | .1 |
| Local temps are more likely to recruit your staff. [Ranked "local temp" last in q32.]   | 1 | .1 |
| More important than cost effectiveness: Permanent techs provide better quality care & better continuity of care. That is much more important.   | 1 | .1 |
| Most of our techs do not have time during their workday for workplace CEUs, and they do not want to utilize free ceu's from our institution; they always want to be sent somewhere for a class. My experience with traveling temps/local temps and recruiting firms has been poor quality techs or non-committed attitudes.   | 1 | .1 |
| No longer in mgmnt. After 11 years I decided to return to a front line tech position - and I'm loving it!   | 1 | .1 |
| Organization must consider recognizing diagn. technologist as specialist. Procedure volume requires a special and dedicated employee. All modalities are specialized in today's market. Recognizing the needs of your core staff. Adjusting pay scale to market needs and rewarding staff for performance has eliminated the need for travelers. (Travelers are a dangerous market and gaining power.) It is hard for organization to compete. Address needs now and this problem goes away.) | 1 | .1 |
| Other costs in locums are airline fares, car rentals, mileage, apartments, per diem, phone (local); questionable quality of locum; JCAHO requirement; verification of credentials; locums not committed to good quality patient care; not concerned about patient satisfaction. I do not feel healthcare will be able to afford them.   | 1 | .1 |
| q3b, 250 employees: (Radiology)   | 1 | .1 |
| qs28,29: temps' pay "at least" [50% higher]   | 1 | .1 |
| Since i work in a small office x-ray techs are cross trained into many other positions  | 1 | .1 |
| Some advantages of contract travellers are the following: 1.) Minimal days off requested and virtually no vacation requests. 2.) Minimal sick days with contract employees  | 1 | .1 |
| Staffing levels would be greatly enhanced if schools could expand their student   | 1 | .1 |

|  |     |       |
|--|-----|-------|
| enrollment numbers   |     |       |
| Techs are turning to traveling for the increased salary -- making it difficult to find perm techs. Traveling techs' salaries are +-30% over perm salaries -- making it impossible to hire perms -- especially in a resort area.  | 1   | .1    |
| Temps can demand too many things -- or actually, refuse to do too many things, such as take call, or work a shift they don't like. Then when the permanent staff tech sees the temp make lots of money & work only how & when they want, their morale goes way down.   | 1   | .1    |
| The actual pay that a temp receives per hour is about 20% higher than a perm tech but we also have to pay for car, lodging, & a meal per diem which is what cost 150% more in total than regular tech. I use AHRA stats for productivity benchmark   | 1   | .1    |
| The last parts of this survey do not apply to my current position  | 1   | .1    |
| This questionnaire was too lengthy.  | 1   | .1    |
| Training your own people to fill modalities has been a very cost effective measure for us. It has also improved morale & increased retention of technologists.   | 1   | .1    |
| Traveling costs are 3 times that of a staff technologist's. If find that if we have a "local traveler" I only save \$ in housing. Still have to pay the per diem, rental car, etc.   | 1   | .1    |
| However, the dollar amount the actual tech receives is hard to know, i.e., a sonographer on staff may make \$25/hr while the traveler may make \$35/hr but the cost to the hospital is \$75/hr.  |     |       |
| Traveling/temp agencies are the scourge of this profession. I dislike working in the event I have to resort to that form of employee placement. I hate the fact that they call facilities & try to recruit techs. We are fully staffed, thankfully, and when techs get those calls they forward them to me. I ask for the company/agency name, then tell the caller that their agency is low on my "hit list." |     |       |
| We have a very stable staff & rarely have the need for a temp. We only use 1 traveling temp is 2 staff positions are open for hire. The traveling temp stays on 1 tx unit to limit training time while the permanent staff continues rotations to all areas  | 1   | .1    |
| We have been very fortunate in that we have not had a lot of need of temp techs.   | 1   | .1    |
| We have an odd weekend shift that we have been filling with local temps. I find them to be below par & very expensive.   |     |       |
| We have used temps only for MR & Nuc Med. Cost has varied by firm used -- more than by local vs. traveling. BUT all of them have been great!   | 1   | .1    |
| We need MANY more effort in promoting, supporting & enhancing NEW technologist & RETIRED tech into the market. We are fighting an uphill battle because of workload issue & dissatisfaction with team building if staffing isn't optimal.  | 1   | .1    |
| We need to look at the temporary staffing increase and decide how to make that position less attractive to the too few radiation therapists that exist. Temp   | 1   | .1    |
| While I am retired, I did try to provide responses that would have been appropriate if I were still active.  | 1   | .1    |
| While permanent staff resent agency staff, they've accepted need in order to have help   | 1   | .1    |
| Would like to see sign-on bonuses disappear as this has created a negative impact on small facilities to fill staffing needs w/high quality techs. Small practices cannot compete w/large institutions on this issue   | 1   | .1    |
| Total  | 670 | 100.0 |

## Additional Comments Written Various Places on Questionnaire

Comments are organized by the question addressed, rather than by respondent. A total of 56 (8.4%) questionnaires contained additional comments.

### Bonus Comments

**Responsibilities:** [hiring]: Direct reports. [discipline]: Direct report.  
**% of time on various tasks:** Dept. of one  
**Type of institution:** next to "Educational institution": Academic practice - rad onc.  
**Size of institution:** 1800 exams: new pts @ 4 sites. 60 employees: -- only 5 of which are RTTs.  
100 exams: (x-ray dept)  
103 employees: in radiology  
130 exams: "yr"  
17,500: Crossed out "exam", wrote in "procedures".  
38 employees: Rad employees  
40 employees: Civilian / Also have 25 other military personnel onsite.  
40,000 exams per month: nationally  
50 employees: (technologists)  
55 employees: \*Rad Staff  
600 exams: Radiology. 130 employees: Total  
exams & employees: "my area", "my employees"  
exams & employees: Radiology  
circled "institution", wrote in "area" [where you work].  
**Years as ASRT member:** 3-5 years: A guess  
**Years as Management Chapter member:** Don't remember  
**Member of any other management-relevant association?:** state or local nanl:CSRT.  
**Staff access to online CE:** [may count as on-job]: Although very few do.  
[...doing so as on-job time]: If work load permits this luxury -- if not can be done after hours.  
**[location of other computers staff can use:** The hospital training lab.  
Break area.  
Each employee has their own computer.  
**Policy with respect to non-CE use of Internet:** [as long as doesn't interfere]: We do not have abuse  
though.  
beside choice [... or serve an educational ...]: Ideal  
**Attitudes toward applications training:** effect on morale: Undecided.  
**Use, training of R.T. aides:** Orderly.  
We call them tech assistants.  
**Budgeting strategy:** [accurate as possible]: Based on expected volumes.  
next to "accurate": by reviewing historical data.  
Forecast based on new services, ventures, etc.  
**Benchmarking surveys:** willing/able (to share)  
[Yes have done benchm but no not at liberty to share]: Very limited surveys and site specific.  
[Yes, have done benchmarks but No, sharing]: I am on LOA until Feb.  
**Under what circumstances hire temp/traveling R.T.:** Only if absolutely necessary  
**[Local temp vs. permanent tech salary/wages:** [local temps' total comp higher]: per case rates  
Never have used  
\$36/hr RAD, \$40/hr CT, \$50/hr Nuc Med  
**All questions about temp vs. permanent techs:** N/A; No input  
**Traveling temp vs. permanent tech salary/wages:** 246% higher: (all inclusive rate)  
[equal ave]: I doubt it anywhere.  
**Questions about cost-benefit ratio of temp vs. permanent:** "Human Resource question"  
**Cost/benefit ratio of local temp vs. permanent tech:** Depends on situation  
No brainer! NO managers like to hire temps!  
[permanent more cost effective]: None or very few available. People casting[?] for perm. Techs.  
**[Cost/benefit ratio of traveling tech vs. permanent tech:** [hire pmnt mce]: More importantly, a perm  
tech has loyalty, interest in improving. Learning curve is gone after several months.  
Lots of N/As were written in next to temp vs. permanent comparison questions.
