

# Burn Prevention

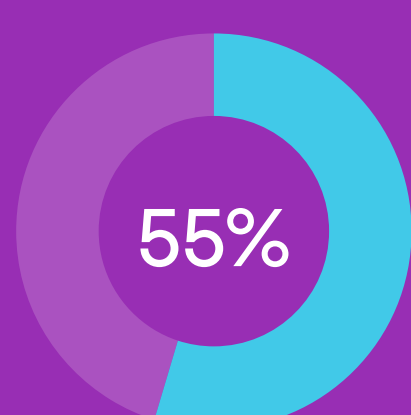

**MR Safety Week**  
asrt

- No contact with bore
- Screening for devices, implants, onplants, metallic objects and materials, and removal if appropriate
- Cables insulated and not in contact with patient
- Padding placed appropriately
- Patient wearing hospital gown
- No skin-to-skin contact

Burns account for 59% of all MRI-related injuries.<sup>1</sup>

55% of burn incidents are caused by contact with objects, bore and skin-to-skin.<sup>1</sup>

These measures can prevent 100% of burn injuries in clinical care scenarios.
